SELINSING GOLD MINE

The Selinsing Gold Mine includes the Selinsing Gold property, Buffalo Reef property, Felda land and Famehub properties. Updated resources & reserves show Selinsing as a sulphide gold rich project (see NI43-101 Technical Report Prepared by Snowden, filed Dec. 14, 2016 on SEDAR). An internal Feasibility Study is being carried out to deliver an Execution Plan for the Sulphide Project.

MURCHISON GOLD PROJECT

The Murchison Gold Project comprises the Burnakura, Gabanintha, and Tuckanarra properties in Western Australia. Development work is ongoing, while progressing towards a Preliminary Economic Assessment Study ("PEA"), and studying underground opportunities. Three drilling programs were completed including: Burnakura Deeper Pit, NOA 7/8 Deep Exploration, and Burnakura Shallow Oxide. Significant results were announced with positive geological outcomes. At ANA, mineralization has been shown to be continuous at depth, and at NOA 7/8 mineralization has been extended approximately 130m down plunge. Burnakura mineralization remains open at depth below 200m.

MENGAPUR COPPER-IRON PROJECT The Mengapur Copper-Iron Project is located in Pahang State, Malaysia. The Company has carried out exploration programs to confirm historical resources and conducted metallurgical testwork to study downstream commodity products. A NI 43-101 Technical Report: Mineral Resource Estimate, Mengapur Cu-Au Deposit, Malaysia was filed on October 29, 2018 and prepared by Snowden Mining Industry Consultants Pty Ltd. (See Technical Reports at www.monumentmining.com). The Company entered into a Deed of Variation Agreement with Intec International Projects Pty Ltd, to exploit the Intec Technology for the sulphide copper process. The Mineral Resource estimate together with the metallurgical testwork in progress will provide a foundation to develop a feasibility study.
