SELINSING GOLD MINE

The Selinsing Gold Mine includes the Selinsing, Buffalo Reef, Felda land, Peranggih and Famehub properties. Updated resources & reserves show Selinsing as a sulphide gold rich project (see NI43-101 Technical Report Prepared by Snowden, filed Jan. 31, 2019 on SEDAR). The Feasibility Study gives a green light to fund the conversion of the gold plant to treat sulphide materials.

MURCHISON GOLD PROJECT

The Murchison Gold Project comprises the Burnakura, Gabanintha, and Tuckanarra (20% free carried interest) properties in Western Australia. Monument has been systematically performing the necessary work to validate the historical resources and discover new resources to continue updating the current resources under NI43-101 guidelines. At the Burnakura site there is an operational 260KTPA gold processing plant, 118 man mine camp, and all the necessary infrastructure. Previous drill programs announced significant results with positive geological outcomes. At ANA, mineralization has been shown to be continuous at depth, and at NOA 7/8 mineralization has been extended approximately 130m down plunge. Burnakura mineralization remains open at depth below 200m. In July 2021 began drill Phase 1 of a two year extensive exploration program at Murchison.
